EDUCATION

Columbia University

M.S. in Computer Science, expected May 2027

Relevant coursework: distributed systems, machine learning, databases, algorithms.

University of Toronto

B.S. in Computer Science and Statistics, May 2025

Coursework included data structures, operating systems, probability, and software design.

EXPERIENCE

Data Platform Intern, BrightLedger Analytics

May 2025 - August 2025

Built Python validation scripts for transaction datasets, improving reliability of downstream analytics workflows used by data and product teams.

Investigated failed ETL checks and documented recurring data quality issues across ingestion jobs, giving engineers clearer debugging paths.

Created SQL queries and lightweight dashboards to trace delayed data refreshes and support product analytics review.

Teaching Assistant, University of Toronto

September 2024 - December 2024

Supported an introductory data structures course by grading assignments and leading weekly office hours for Python and Java implementations.

Helped students debug trees, graphs, and DP assignments while explaining algorithmic tradeoffs clearly.

PROJECTS

Campus Course Planner

Built a React and Node.js planning tool that helps students compare schedules, prerequisites, and degree requirements.

Designed PostgreSQL tables for courses, saved plans, and prerequisite relationships to support structured search.

Implemented filters for department, time, professor, and requirement type to improve course discovery.

Recommendation System Prototype

Trained a Python collaborative filtering model and evaluated ranking quality with precision and recall.

Compared recommendations against known user preferences and documented model limitations for future iteration.

SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL.

Frameworks and tools: React, Node.js, PostgreSQL, Git, Docker, pandas.

Foundations: data structures, algorithms, databases, machine learning, data validation.
